

Cristián Camilo Rodríguez

Full Stack Developer

📍 Colombia (Remote, GMT-5) ✉ mashlowtm0510@gmail.com ☎ 318 6562061 🌐 cami98735264

Summary

Full Stack Developer with 2 years shipping production TypeScript/React/Next.js + Node.js platforms end-to-end, including Python/Django services and Laravel admin tooling.

Specialist in third-party integrations — Front, GitHub API, n8n workflows, multi-LLM (OpenAI, Gemini, Claude), Agno AI agents, webhooks, REST/GraphQL — and CI-wired Cypress + Percy test suites that gate every release.

Production reliability work: Cloudflare Workers latency optimization, Argo CD preview environments, Sentry monitoring, and Celery/worker-based async pipelines.

Experience

Swapps, Full Stack Developer – Colombia (Remote) June 2025 – present

- Shipped 4+ greenfield client platforms (legal, healthcare, civic-tech, and internal) end-to-end in TypeScript/React/Next.js and Node.js, owning architecture, release engineering, and client-facing technical handoffs.
- Re-implemented the Dejusticia donation landing and hardened payment edge cases after a critical regression, restoring the donation flow and unblocking an active fundraising campaign.
- Re-engineered swapps.com chat reliability on Cloudflare Workers: KV caching cut a >10s lookup path to ~0.5ms (bounded retries + timeouts), and silent ~45min email failures became immediate HTTP 502s surfacing the underlying cause.
- Built the team's CI/CD foundation: Cypress + Percy E2E and visual regression coverage across 20+ production URLs, Argo CD preview environments per PR, and GitHub Actions pipelines averaging ~3.5min — enabling daily deploys without manual QA.
- Architected and built an AI-driven n8n workflow integrating with Front that auto-classifies inbound support-channel tickets as support-related vs other, giving the team at-a-glance visibility into client requests.
- Built and refined Agno multi-agent systems for swapps.com chat and the Swapps Platform (an internal client/employee transparency dashboard): a PM agent (follow-up questions + structured JSON driving the UI wizard) feeds gathered context to a Prompt Builder agent that generates AI-driven prototypes from client requirements.
- Internal swapps.com tooling: Laravel admin for dynamic survey configuration (Analizar y Lombana) eliminating manual duplication, plus a bilingual case-study template migration with URL-preserving redirects that protected SEO ranking through cutover.

PayBluem, Full Stack Developer – Espinal, Tolima, Colombia July 2023 – Sept 2024

- Built a sports tournament management platform end-to-end (registration → live brackets → finals), replacing manual spreadsheet scheduling with a real-time bracket and role-based access system.
- Built an AI-powered license plate recognition system (YOLOv8) with behavior analysis and a reporting dashboard, processing real-world camera footage in production.
- Developed an accessible Colombian Sign Language interpretation platform using GPT-4 via the OpenAI API with real-time visualization, expanding digital accessibility for deaf users.

Education

Technician Instituto Tolimense de Formación Técnica Profesional (ITFIP), Technician in Web Programming – Espinal, Tolima, Colombia Jan 2024 – Jan 2025

- Coursework: full-stack web development, databases (SQL/NoSQL), software engineering fundamentals, and version control.

Projects

Graduate Tracking System

Institutional alumni-tracking platform that replaced manual record keeping; built with React + DaisyUI frontend and an Express.js REST API secured with JWT auth and express-validator schemas; supports role-based dashboards for admins and graduates.

Sensor System Sessions

Secure authentication and session-management service for IoT sensor monitoring; React + Express.js with email-based one-time codes via Nodemailer and case-based validation flows hardening account-recovery paths.

Vehicle & Order Management System

Logistics platform automating trip and vehicle assignment for construction companies; Svelte + Express.js with role-based authentication and centralized order data, replacing spreadsheet-based dispatch and reducing assignment errors.

WhatsApp GPT-4 Bot

Conversational AI bot built on whatsapp-web.js and the OpenAI GPT-4 API; supports natural-language Q&A, image manipulation, sticker generation, and custom meme creation directly inside WhatsApp.

Skills

Core Stack: TypeScript, JavaScript, React, Next.js, Tailwind CSS, Node.js, Express.js, REST, GraphQL, JWT, OAuth

Secondary Stack: Python, Django, Svelte, Astro, Laravel, PHP

AI/ML & Agents: Agno (multi-agent systems — design, build, refine), OpenAI (GPT-4), Google Gemini, Anthropic Claude, multi-LLM workflows, YOLOv8

Integrations & Automation: Front, n8n, webhooks, GitHub API, third-party API integrations

Databases: PostgreSQL, MySQL, MongoDB

Cloud & DevOps: AWS (EC2, S3), Cloudflare Workers, Cloudflare KV, Docker, CI/CD, GitHub Actions, Argo CD, Linux, SSH, Vercel, Netlify, Render

Testing & Quality: Cypress, Percy, End-to-End Testing, Visual Regression Testing, Automated CI Checks

Observability & Async: Sentry, WebSockets, Celery, background workers/queues

Architecture & Collaboration: System Design, Design Patterns, Agile/Scrum, Figma, Technical Documentation

Languages

Spanish: Native

English: B2 Upper Intermediate (professional working proficiency)
