Summary

Full Stack Developer (2+ years) shipping production TypeScript/React/Next.js + React Native platforms end-to-end, with backend work in Node.js/Express, Python/Django and Laravel. Specialist in AI tooling (Agno multi-agent systems, MCP servers, multi-LLM via OpenAI/Gemini/Claude) and integrations (Front, Pipedrive, n8n, GitHub API), backed by CI-wired Cypress + Percy suites and production reliability work on Cloudflare Workers, Argo CD, Sentry and Celery/worker pipelines.

Experience

Swapps, Full Stack Developer – Colombia (Remote) June 2025 – present

- Shipped 4+ greenfield client platforms (legal, healthcare, civic-tech, internal) end-to-end in TypeScript/React/Next.js + Node.js, plus Laravel admin tooling and SEO-safe template migrations — owning architecture, release engineering, and client-facing handoffs.
- Extended the internal transparency dashboard into a cross-platform React Native mobile app, sharing TypeScript domain logic between web and mobile clients.
- Re-engineered swapps.com chat reliability on Cloudflare Workers (KV caching cut a >10s path to ~0.5ms; silent ~45min email failures became immediate HTTP 502s) and rescued a critical donation-flow regression that was blocking an active fundraising campaign.
- Built Swapps' internal AI gateway (OpenAI/Gemini/Claude abstraction removing commercial rate-limit and cost ceilings) plus an autonomous AI Support pipeline on Front + n8n that triages tickets, asks clarifying questions and has Copilot open the PR — replacing manual L0–L1 handling.
- Owned the team's CI/CD + GitOps foundation: Argo CD preview envs per PR with SOPS-encrypted secrets, plus Cypress + Percy E2E + visual regression across 20+ URLs gating ~3.5min pipelines.
- Shipped support/sales integrations: Pipedrive Deals app + contract generation, helpdesk ↔ Front sync, Agno multi-agent systems (PM + Prompt Builder) for prototypes, and a Zapier app.

PayBluem, Full Stack Developer – Espinal, Tolima, Colombia July 2023 – Sept 2024

- Built a sports tournament management platform end-to-end (registration → live brackets → finals), replacing manual spreadsheet scheduling with a real-time bracket and role-based access system.
- Built an AI-powered license plate recognition system (YOLOv8) with behavior analysis and a reporting dashboard, processing real-world camera footage in production, plus an accessible Colombian Sign Language interpretation platform using GPT-4 via the OpenAI API.

Education

B.Eng. **Universidad del Espinal (UniEspinal)**, B.Eng. in Systems Engineering July 2026 – present

Technologist **Universidad del Espinal (UniEspinal)**, Technologist in IT Management Jan 2025 – July 2026

- Capstone research: AI-assisted Taekwondo movement detection platform (Django/Python + TypeScript/React + YOLOv8) — institutional seminar work, published academic poster.
- Database design, systems analysis and design, operations research (linear programming → Simplex Method MCP Server), systems modeling, information systems audit.

Technician **Universidad del Espinal (UniEspinal)**, Technician in Web Programming Jan 2024 – Jan 2025

- Full-stack web dev, databases (SQL/NoSQL), software engineering, version control.

Skills

Stack: TypeScript, React, Next.js, React Native, Tailwind, Node.js, Express, REST, GraphQL, JWT, OAuth · Python, Django, Laravel, Astro, Go

AI & Integrations: Agno multi-agent systems, MCP servers, internal AI gateway, OpenAI, Anthropic, Gemini, multi-LLM workflows · Front, Pipedrive, n8n, Zapier, GitHub API

Data & Infra: PostgreSQL, MySQL, MongoDB, TypeORM · AWS (EC2, S3), Cloudflare Workers + KV, Docker, GitHub Actions, Argo CD, Linux/SSH

Quality & Process: Cypress, Percy, E2E + Visual Regression, Sentry, WebSockets, Celery · System Design, Agile/Scrum, Figma, Technical Documentation

Languages: Spanish (Native), English (B2 — professional working proficiency)
